

## Lab 3 - Example Performance Statistics

We list below some performance statistics of a Genetic Algorithm written last year by one of the TAs for Lab 3. These statistics are computed by running the GA for 30 minutes on each of the selected problems. Note that the statistics here should be used as a reference, they do not necessarily reflect the optimal results.

| Problem Number | Best fitness (max = 1.0) |
|----------------|--------------------------|
| 1              | 1.00                     |
| 4              | 1.00                     |
| 7              | 0.9916                   |
| 11             | 1.00                     |
| 12             | 0.8705                   |
| 15             | 0.9915                   |
